New York City, NY | [linkedin.com/in/anuj-jadhav](https://www.linkedin.com/in/anuj-jadhav) | +1 (517) 944-2701 | apj2131@columbia.edu

RESEARCH INTERESTS

Portfolio construction and optimization, stochastic control, and risk management, with growing interest in reinforcement learning and other AI applications in finance and in quantum algorithms for combinatorial optimization problems in finance. Approaches these problems through operations research, with a focus on developing methods with strong theoretical foundations.

EDUCATION

COLUMBIA UNIVERSITY, School of Engineering and Applied Science (SEAS) New York City, NY
*Master of Science, **Operations Research*** Aug 2026 – Dec 2027

Relevant Coursework: Optimization Models and Methods, Introduction to Probability and Statistics, Stochastic Models, Programming for Financial Engineering, Pricing Models for FE

MICHIGAN STATE UNIVERSITY, College of Engineering East Lansing, MI
*Bachelor of Science, **Computer Science** – GPA: 3.95/4.0* Aug 2022 – Dec 2025

Minors: Data Science, Business, Computational Mathematics Science and Engineering (CMSE)

RESEARCH EXPERIENCE

MICHIGAN STATE UNIVERSITY, Lyman Briggs College East Lansing, MI
Research Assistant, Part-time May 2026 – Present

- Extended StockGPT, an open-source quantitative equity research platform, under Prof. Prudence Djagba to incorporate market, fundamental, and options data into signal-driven investment analysis
- Built and evaluated ARIMA, Prophet, Random Forest, and LSTM forecasting pipelines for price-direction and fair-value prediction across a rigorous time-series validation framework
- Developed reusable predictor modules for technical scoring, analyst consensus, momentum/mean-reversion signals, and options implied volatility; lead and co-author on a resulting paper (in progress)

UNIVERSITY OF MICHIGAN, Department of Industrial & Operations Research Ann Arbor, MI
Summer Research Assistant, Part-time June 2026 – Aug 2026

- Studied dynamic and multiagent principal-agent contract theory under Prof. Romesh Saigal, working through his papers on continuous dynamic programming, multiagent incentive contracts, hierarchical multi-agent contracts, and a fictitious principal-agent representation of stochastic control
- Traced derivations of Hamilton-Jacobi-Bellman equations for continuation value functions, building on Sannikov's martingale representation approach to continuous-time contracting
- Built underlying mathematical foundations in stochastic calculus, martingale theory, and Black-Scholes derivation, including the Feynman-Kac theorem

WORK EXPERIENCE

MICHIGAN FARM BUREAU INSURANCE, IT Financial Services Lansing, MI
Associate Business Intelligence (BI) Analyst, Full-time Sep 2025 – Aug 2026

- Designed and optimized complex SQL Server queries using T-SQL, indexing, and stored procedures to improve data processing speed and reliability for enterprise reporting
- Developed interactive SQL Server Reporting Service (SSRS) reports & Tableau dashboards by translating business requirements into actionable insights, empowering stakeholders to make data-driven decisions
- Collaborated with IT and business teams to validate, troubleshoot, and enhance reporting solutions ensuring data accuracy, consistency, and long-term reliability

- Proposed and led the full-stack development of a cross-platform React-Native mobile app to serve 11,000+ incoming orientation participants improving orientation access and experience
- Implemented authentication using OpenID Connect (OIDC) and Okta Single Sign-On (SSO) for integrating with university centralized access infrastructure
- Acted as Project Manager for a 5-person Agile team, facilitating sprints, backlog grooming, and sprint reviews using Jira to ensure on-time delivery

- Executed functional, regression, and exploratory tests across web and desktop apps, delivering high-quality feedback and detailed bug reports to engineering and product teams
- Collaborated with six cross-functional Agile Scrum teams, using Backtrace for crash diagnostics and GitHub for issue tracking to streamline debugging
- Enhanced product reliability and performance by effectively identifying and resolving 40+ critical software issues, leading to smoother software releases and a more robust user experience

PROJECTS

HelpUnity (www.help-unity.com), Burgess Institute for Entrepreneurship & Innovation

- Founded and built full-stack mobile platform (React Native, Firebase, GCP) connecting volunteers with organizations through event management and engagement features
- Developed core features including event posting, volunteer tracking, and real-time data handling supporting active user interaction and platform usability

AI Powered Financial Wellness Coach, Michigan State University Federal Credit Union ([MSUFUCU](#))

- Led 6-person team as Project Manager to design AI-powered financial coaching platform using Next.js, FastAPI, PostgreSQL, and OpenAI APIs for personalized financial insights to credit union members
- Implemented a secure Model Context Protocol (MCP) middleware using FastMCP to integrate banking APIs with LLMs, enabling modular, scalable, and context-aware financial recommendations

SKILLSET

Programming	Python, SQL, C++, R, TypeScript, VBA
ML/AI	PyTorch, TensorFlow, XGBoost, Prophet
Frameworks	FastAPI, Next.js, FastMCP
Libraries	NumPy, Pandas, SciPy, scikit-learn, statsmodels
Infrastructure	Git, Azure DevOps, AWS, GCP
Data Tools	Tableau, SSRS, SSMS, Microsoft Fabric
Other	LaTeX
